

Computer Donation – Step by Step Instruction for Setup

Step One:

- Location
 - Find a location with a grounded outlet and a clean flat space to place the equipment for setup like a desk or table.
 - Physically identify and separate the computer and monitor for setup. Now place in desired location together
 - Place the provided power strip in same location and plug into the outlet.

Step Two:

- Identifying video connection and connecting cables
 - First, turn the computer tower around so the back is facing you. Then check the expansion slots on the bottom of the back panel (19). If there is a card installed with an available connection, you must connect a video cable to this card.
 - In this case it will be using the DVI cable with the **white** end that was provided.
 - If the four expansion slots do not contain a video card, then the monitor will be connected to the onboard VGA port (21) with the provided VGA cable that has a **Blue** end.
 - Connect the provided power cord to the back of the computer (25).

For more detailed picture references, see page 4

Computer Donation – Step by Step Instruction for Setup

Step Three:

- Connecting the monitor cables
 - Connect video cable you have set up already on the back of the computer to appropriate monitor input.
 - If you are connecting VGA (4)
 - If you are connecting DVI (3)
 - Plug in the provided power cord to monitor (1).

Step Four:

- Connecting peripherals
 - Unravel and connect the USB cord for the keyboard and mouse provided to the USB ports on the back of the computer. (23)
 - If a wired connection is preferred, plug in provided ethernet cable (15) and then connect to your home modem or router.
 - If a wireless connection is needed that will be explained in **step six**.

Step Five:

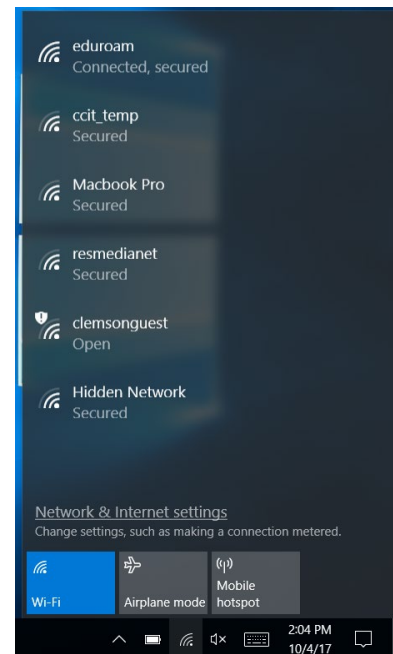

- Starting up the system
 - At this point, the power cords for the computer and monitor can be plugged into the power strip and both can be turned on.
 - The computer should boot into Windows and you will see the desktop screen to the right.

Step Six:

- Setting up wireless connection
 - Unbox the provided wifi adapter and identify the USB dongle for connection.
 - Connect the USB dongle to one of the available USB ports in preferred location on the computer.
 - The device will most likely install automatically, but if needed there will be a provided disk for installation in the box.
 - Now search for available wireless connections by clicking the small icon in the lower right of the task bar. 
 - This will open a small window just above with a list of available wireless connections to choose from.
 - Choose the appropriate connection and enter the password if required.
 - Test connection by opening preferred browser and going to any web page.
